

DESCRIPTION

Tank blanketing valves are commonly used in tank storage systems to prevent and protect against explosions (avoiding flammable liquids being vented from vessel), to control product contamination against external air that may fill the vapour space, to reduce evaporation losses (consequently, production losses), to reduce internal corrosion (caused by air and moisture) and to prevent vacuum condition.

The blanketing process consists in covering the stored medium, usually a liquid, with a gas (normally N2).

Compact design.

No rising stem, except when supplied with top cap.

STANDARD SURFACE FINISH

Body and internal wetted parts: ≤ 0,51 micron Ra – SF1.

Body external: ≤ 0.76 micron Ra - SF3. Cover: internal machined; external as casted.

Other surface conditions see IS PV20.00 E - Technical

information.

Ultrasonic cleaning.

OPTIONS: Diaphragm leakage line connection.

Gauge connection on body.

External pulse line (recommended for low set

pressures < 10 mbar or high flow).

Dome loaded (for higher pressure control).

Blanketing with vacuum.

Top cap (adjusting screw sealing).

Hastelloy wetted parts. ATEX & version.

USE: Compressed air, nitrogen and other gases

compatible with the construction. **AVAILABLE** BKR2 - Low pressure regulator. MODELS:

SIZES: 1" - DN 25.

OUTLET SPRING

RANGES:

5 to 500 mbar (4000 mbar with dome load).

CONNECTIONS: Clamp ends or others on request.

PACKAGING: Assembling and packaging in a clean room

certified according to ISO 14644-1.

The product is end capped and sealed with recyclable thermo-shrinkable plastic film, to

avoid contamination.

INSTALLATION: Vertical installation recommended (to allow

> draining) or horizontal as close to process as possible in order to prevent long pipe

sections and flow restrictions.

For an economical consumption of blanketing gas, the pressure must be adjusted to remain slightly above the atmospheric pressure, while filling and emptying the vessel. See IMI.

ORDER

REQUIREMENTS: Type of fluid.

Maximum operating temperature.

Inlet pressure and required outlet pressure.

Capacity (maximum and minimum).

FDA / USP Class VI seals certificate on request.

All valves have a serial number. In case of non standard valves, this number must be supplied if spare parts are ordered.

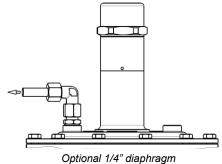

ATEX compliant version

Optional pressure gauge connection.

Optional top cap adjusting screw sealing.

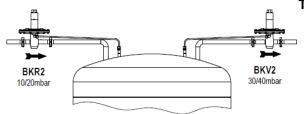

Jptional 1/4" diaphragm leakage connection.
