

ADCATHERM - R Series Tubular Heating Coils (Steam to water)

DESCRIPTION

The ADCA R series steam to water tubular heating coils are shorter and lighter than the alternative tubular heating coils manufactured with smooth pipes. The use of extruded low fin tube has the advantage that it can improve the external surface and thermal performance.

MAIN FEATURES

Corrosion-resistant stainless steel low finned tube bundle construction.

Straight tubes for easy cleaning.

Floating head at the end of the tube bundle, avoiding tube stresses caused by thermal expansion and contraction.

OPTIONS:	Special designs.

USE: Steam, water, hot condensate and	USE:	Steam,	water,	hot	condensate	and

other fluids compatible with the

construction.

AVAILABLE

MODELS: R5, R6, R8 and R10.

CONNECTIONS: Flanged EN 1092-1 or ANSI.

Screwed on request.

INSTALLATION: Horizontally on vertical or horizontal

vessels.

Steam runs inside the tubes and

process water outside.

Remarks: A coil in a cylindrical vertical vessel should be as close to but not exceeding the diameter of the vessel as possible. A coil in a horizontal vessel is typically approximately 2/3 the length of the vessel

SEMI – INSTANTANEOUS HOT WATER HEATER		
If the vessel is also operating as semi-instantaneous hot water heater, please confirm:		
HOT WATER CONSUMPTION	m3	
INCOMING COLD WATER TEMPERATURE	° C	
DESIRED HOT WATER TEMPERATURE	° C	
LENGTH OF TIME (IN MINUTES)	,	

INSTANTANEOUS HOT WATER HEATER		
If the vessel is also operating as instantaneous hot water heater, please confirm:		
HOT WATER CONSUMPTION	m3/h	
INCOMING COLD WATER TEMPERATURE	° C	
DESIRED HOT WATER TEMPERATURE	° C	

Remarks: If the instantaneous hot water consumption is greater than three times the storage capacity of the vessel, then the heating coil may be baffled to allow for an integral pump to force circulate water over the heating coil. We may also recommend the vessel capacity. In this case please supply all the consumption details such as quantity of water and temperatures.
